

CASE STUDY #003 · SUNDAY

Ultrahuman. The made-in-India smart ring outselling Oura at home.

Series · Case Study (Sun) Date · 02 Aug 2026 Subject · Ultrahuman

Framework · Win on an edge nobody else has

The world thinks the smart ring is a Silicon Valley gadget. In India, a homegrown startup outsells every global brand. Here's how Ultrahuman did it.

Ultrahuman, founded by Mohit Kumar in Bengaluru, makes a health-tracking smart ring. In India it holds around 30% of the smart-ring market, rank one, ahead of Finland's Oura and even Samsung. And it runs at roughly a \$150 million annual revenue run-rate.

The surprising part: it didn't win by out-inventing anyone. It won on two edges most people miss.

Edge one: it isn't really selling a ring. The ring is just the wedge, the thing you wear 24/7. On top sits a metabolic layer (glucose sensing, blood markers, recovery) and, underneath, years of your health data. That data is the moat. Once it knows your body, leaving is expensive.

Edge two: every ring is made in India. While rivals import, Ultrahuman iterates faster and controls its costs at home. Manufacturing isn't a footnote, it's the advantage.

Now the honest part. Winning at home is not the same as winning the world. Oura holds two-thirds of the global market and sued Ultrahuman in the US, hurting its Ring Air there. Then Oura entered India. The category's own shipments dipped. This is a real fight, on both sides.

The takeaway: you don't have to invent the category to win it. Find the edge nobody else has, home manufacturing plus locked-in data, and win there first.

💬 Made-in-India health tech over a big US brand: comment YES or NO. One word.

❤️ Save this if you're building hardware in India.

REEL · REVERSAL HOOK

Everyone thinks the smart ring is an American gadget. India's Ultrahuman quietly outsells Oura at home.

Around 30% of India's smart-ring market, rank one, and every ring is made in India. Founder Mohit Kumar didn't out-invent Oura. He out-manufactured it at home and locked users in with their own health data.

The ring is just the wedge. The metabolic data underneath is the moat.

1. Case Study, Ultrahuman. The world thinks the smart ring is a Silicon Valley gadget; in India a homegrown startup outsells them all.
2. Snapshot: Ultrahuman, based in Bengaluru and Gurugram, founded by Mohit Kumar, makes smart rings in India, running at about a \$150 million revenue run-rate, competing with Oura and Samsung.
3. The anomaly: India's number-one smart ring is not Oura or Samsung, it's Ultrahuman, at around 30 percent share, and every ring is built in India.
4. The real moat: it isn't selling a ring, it's building a health operating system; the ring is the wedge, the metabolic layer adds glucose and blood markers, and years of your data is the moat.
5. Why it wins at home: around 30 percent India share at rank one, about a \$150 million run-rate, a ₹400 crore Series C in March 2026, and 100 percent of rings manufactured in India.
6. The hard part: winning at home is not winning the world; Oura holds two-thirds globally and sued Ultrahuman in the US, then entered India, and category shipments dipped.
7. The takeaway: you don't have to invent the category, win where you have an unfair edge, home manufacturing plus locked-in data. Follow @statupsutra, Case Study on Sundays.
