

GROWTH CAPITAL #001

BatX Energies — ₹105 Cr Series A. The full write-up.

Series · Growth Capital (Thu) **Date** · 23 Jul 2026 **Subject** · BatX Energies, Gurugram

Framework · Fund the shovel-maker

01 Carousel caption — posts 08:00 IST

They didn't back another EV startup. They backed the one mining dead batteries.

BatX Energies (Gurugram) just raised ₹105 Cr in a Series A led by IvyCap Ventures.

India's EV and energy-storage boom runs on lithium, cobalt and nickel — and India imports almost all of it, mostly from China.

BatX recovers those exact minerals from dead batteries and factory scrap, turning waste into a domestic supply of strategic inputs. It's already commercial, and it's moving up the chain into refining and cathode materials.

That's the signal investors bought: not "recycling is green," but "we can make the scarce input everyone will need."

The lesson isn't about batteries:

In a gold rush, capital funds the shovel-maker. Don't crowd the booming market — own the scarce input that feeds it.

💬 What's the "shovel" in your market?

❤️ Save this for your next fundraising.

02 Reel captions

REEL 1 · PRIMARY · 30S · 09:00

Everyone's chasing India's EV boom. Investors backed the startup recycling dead batteries into the minerals every EV needs.

In a gold rush, capital funds the shovel-maker — own the scarce input, not the crowded output.

REEL 2 · MICRO · 16S · 13:00

The EV gold rush has a bottleneck: critical minerals. BatX recycles dead batteries into them — a domestic supply of lithium, cobalt & nickel.

Own the scarce input.

- Slide 1** — Growth Capital, BatX Energies ₹105 Cr Series A — "They didn't back another EV startup. They backed the one mining dead batteries."
- Slide 2** — Snapshot: BatX Energies, Gurugram; ₹105 Cr Series A led by IvyCap Ventures; recycles batteries into critical minerals.
- Slide 3** — India's EV boom runs on lithium, cobalt and nickel — and it imports almost all of it, mostly from China.
- Slide 4** — Why investors said yes: BatX turns dead batteries into a domestic supply of those minerals; waste processing to strategic input supply.
- Slide 5** — Metrics: 20,000 MTA recycling network, 5,000 MTA hydrometallurgy refining, 4 minerals recovered, 20 MWh refurbishing; already commercial.
- Slide 6** — Risks most people miss: thin feedstock (young EV fleet), volatile lithium prices, capex and Chinese competition.
- Slide 7** — Founder lesson: in a gold rush, capital funds the shovel-maker; own the scarce input. Follow @statupsutra, Growth Capital every Thursday.
