

■ GROWTH CAPITAL #004 · THURSDAY · INDEPENDENCE WEEK

Netrasemi. ₹107 Cr to make chips in India, not import them.

Series · Growth Capital (Thu) **Date** · 13 Aug 2026 **Subject** · Netrasemi**Framework** · Fund the chip, not the app

01 Carousel caption (posts 08:00 IST)

Everyone thinks India can't make its own chips. ₹107 crore just backed a startup proving them wrong.

Netrasemi, a Kerala startup, raised a ₹107 crore Series A led by Zoho and Unicorn India Ventures to build edge-AI chips, with its own IP, designed in India.

Why does this matter? India writes world-class software, but imports almost every chip that runs its phones, cars, cameras and defence. Depending on other countries for all of it is a national weak spot.

Here's why serious money backed it. Netrasemi owns its own chip IP, the hardest thing to copy. Its A2000 chip powers smart cameras and edge devices, and the government is co-backing it under the chip-design scheme. Real silicon IP takes years, and that's the moat.

Growth capital here isn't funding an app. It's funding the years and the fabs it takes to make chips at home, riding a national semiconductor mission and an edge-AI boom.

The lesson: growth capital is starting to back India's hardest frontier, the chip itself. Self-reliance is the thesis.

★ Story behind the pick (Independence Week theme)

The strongest self-reliance pick of the week: chips are the one input modern India cannot do without and mostly cannot make. A homegrown chip designer, co-backed by Zoho (itself a self-reliance icon) and the government, is independence at the deepest layer of the stack, the silicon everything else runs on.

03 Alt text 7 slides

1. Growth Capital, Netrasemi. Everyone thinks India can't make its own chips; ₹107 crore just backed a startup proving them wrong.
2. Snapshot: Netrasemi, based in Kerala, raised a ₹107 crore Series A led by Zoho and Unicorn India Ventures, building edge-AI chips with in-house IP.
3. Why it matters: India writes world-class software but imports almost every chip that runs its phones, cars, cameras and defence, a national weak spot.
4. Why investors said yes: Netrasemi owns its own chip IP, the hardest thing to copy; its A2000 chip powers smart cameras and edge devices, and the government is co-backing it.
5. What growth capital buys: a ₹107 crore Series A to scale to production, Zoho co-leading, the A2000 chip heading to production, and government backing under the chip-design scheme.
6. The wave: India wants to make chips, not just buy them, with a national semiconductor mission, an edge-AI boom and the China-plus-one shift all pointing the same way.
7. The lesson: growth capital is starting to fund India's hardest frontier, the chip itself, not the app on top; self-reliance is the thesis. Follow @statupsutra, Growth Capital on Thursdays.
