

■ GROWTH CAPITAL #003 · THURSDAY

Raghu Vamsi Aerospace. \$40M into the supply chain behind jet engines.

Series · Growth Capital (Thu) **Date** · 06 Aug 2026 **Subject** · Raghu Vamsi Aerospace

Framework · Fund the hard-to-build supply chain

01 Carousel caption (posts 08:00 IST)

Everyone thinks India's growth capital chases apps. \$40 million just went into a company that machines metal for jet engines.

Raghu Vamsi Aerospace, a Hyderabad company founded by Vamsi Vikas, just raised a \$40 million Series B co-led by Norwest and Skegen. It makes precision-engineered components for aircraft and defence systems. No app, no consumer brand, just deep, capital-heavy manufacturing. So why did serious growth investors write that cheque?

Because the world's top aerospace names already buy from it: GE Aerospace, Safran, Honeywell, Collins. And that's the whole point. Getting qualified to supply a jet-engine maker takes years of audits, testing and certification. Once you're in, you're extremely hard to replace. That certification is the moat, and it's one you can't copy in a weekend.

This is what growth capital is for. It isn't seed money betting on an idea. It's fuel to scale a base that already works. The \$40 million goes into more capacity across its 10-plus facilities in India, the UK and the US, and a new integrated campus near Hyderabad airport.

And it's riding a powerful wave. Rising global defence budgets, the world's "China plus one" hunt for new suppliers, and Make in India are all pointing at exactly this. Right supplier, right moment.

The lesson: growth capital doesn't only chase software. It funds the hard-to-build supply chain behind a boom. A moat that takes years to build, riding a decade-long tailwind, is exactly what growth investors want.

💬 Software or manufacturing, where's India's real long-term edge? Comment one word.

❤️ Save this if you're building something hard.

1. Growth Capital, Raghu Vamsi Aerospace. Everyone thinks India's growth capital chases apps; \$40 million just went to a company that machines metal for jet engines.
2. Snapshot: Raghu Vamsi Aerospace, based in Hyderabad, founded by Vamsi Vikas, raised a \$40 million Series B co-led by Norwest and Skegen, making precision aerospace and defence components.
3. The anomaly: no app, no brand, just precision metal for aircraft and defence, deep capital-heavy manufacturing, so why did top growth investors write a \$40 million cheque.
4. Why investors said yes: the world's top aerospace names already buy from it, GE Aerospace, Safran, Honeywell and Collins, and multi-year supplier certification makes it hard to replace, that is the moat.
5. What growth capital buys: \$40 million to scale capacity, 10-plus facilities across India, the UK and the US, four global aerospace primes as clients, and a new integrated campus near Hyderabad.
6. The wave: India is becoming a global defence and aerospace factory, driven by rising defence budgets, China-plus-one supplier diversification and Make in India. Right supplier, right moment.
7. The lesson: growth capital doesn't only chase software, it funds the hard-to-build supply chain behind a boom, a moat you can't copy in a weekend. Follow @statupsutra, Growth Capital on Thursdays.
